

Logicomms Presents

The ipLDK 20 small business system

ipLDK 20

The future has arrived

The future has arrived

With a maximum capacity of 8 Exchange Lines and 24 Extensions, the ipLDK20 is ideal for the small business or branch Office.

The powerful ipLDK20 is built on state-of-the-art technology with an array of easy to use features developed over years of experience with small business systems.

Powerful and easy to use

The ipLDK20 can offer a comprehensive set of communication features, yet also offer features only normally available on much larger systems.

The addition of advanced functionality, such as VoIP, Networking, Computer Telephony Integration (CTI), USB connectivity, and more, makes this a solution enhancing the competitive edge of your business.

The stylish and innovative 7000 series digital handsets, available in Black or Ivory, successfully deliver the ergonomics and functionality you need for efficient business communications in your office.

As a member of the ipLDK Range of systems, the common functionality and architecture allows the ipLDK20 to seamlessly integrate in to a network of ipLDK systems, making it ideal not only as a stand-alone system, but also as a Branch Office system.

ipLDK20 gives you the option to move to VoIP when the time is right for you. Because it has evolved from traditional PBX technology it can be installed and operated as a traditional telephone system, and at any stage you can integrate the advanced VoIP technology into your business.

CTI

Remote Working and Mobility are key to a successful business today, so ipLDK20 allows you to connect and work wherever you are. Your Home or Remote office can be connected using the LG-Nortel IP Phone, giving a transparent connection to your office system.

Ideal for the business traveller is the LG-Nortel IP softphone, which can be installed onto your laptop. This gives you the freedom to access and be part of your business phone system from anywhere in the world through broadband services.

The system can link your mobile phone to your desk extension, allowing you to take calls when you are out, and even transfer them back into other system extensions.
